Re: **Evaluation of Potential Locations for Aid4Face2Geo
Deployment in Gaza for Child Aid Distribution (May 2025)**

Given the ongoing humanitarian crisis in Gaza, [Aid4Face2Geo](#) could deploy **semi-mobile identity, health check-in, and nutrition distribution checkpoints** in the [Gaza Strip – Palestine](#) near border areas where displaced Palestinian children are concentrated. Below is an analysis of feasible locations, considering **accessibility, security, and Israeli military constraints**.

1. Key Criteria for Location Selection

- Proximity to Egypt (Rafah Crossing) or Jordan (via Kerem Shalom/Allenby Bridge)
 - Areas with high child displacement (IDP camps, [UNRWA](#) shelters)
 - Israeli military deconfliction zones (to avoid strikes or blockades)
 - Logistics feasibility (aid corridors, road access)
-

2. Most Likely Acceptable Locations to Israel

a. **Gaza-Egypt Border (Rafah Crossing) – Most Viable**

b. **Kerem Shalom Crossing (Israel-Gaza Border) – Conditional Access**

⚠ **Why Risky?**

- Israel controls all aid inspections – delays likely.
- Recent attacks on aid convoys (e.g., May 2024 incidents).

📍 **Possible if:**

- Direct coordination with [COGAT \(Israeli military aid coordination unit\)](#).
- Deployment inside a secured "humanitarian island" (if Israel approves).

c. **Jordanian Route (Allenby Bridge → West Bank → Gaza) – Least Likely**

✗ **Why Unlikely?**

- Israel blocks most West Bank-to-Gaza movement.
- Longer, more complex logistics.
